# Fairy down... the professional's choice!

light, very warm and proven by  
over 40 leading expeditions

Fairy down sleeping bags presently exported to 14 countries each with widely varying and often rigorous climatic conditions, were commended by Hillary and Tensing in an unsolicited statement after the 1953 ascent of Everest as "the best that can be obtained anywhere in the world." Many of the world's leading expeditions, including the successful 1968-69 British Trans-Arctic Expedition

which used Fairy down bags continually for 18 months in the Arctic, have endorsed this statement by their continual use. Fairy down technology has been developed both scientifically and from practical experience of over 40 leading expeditions to the coldest severest climates of the world. The filling is blended from the world's most carefully chosen down to give added loft and greater comfort.

The North Col bag is designed to roll up firmly and compactly into a built-in carry pouch... which is also convenient for holding extra clothing and serving as a pillow.

THE NORTH COL sleeping bag brings lightweight warmth and comfort in normal conditions, PLUS the safety margin you need if bad weather closes in. Evenly and generously filled with 100% pure down and feather down, the bag is firmly stitched in chevron type compartments for even retention of heat. Rip Stop Nylon outer and tough wearing cambic inner make the North Col the professional's choice.

## SIR EDMUND HILLARY'S COMMENTS:

"They excel at sea level or at 28,000 feet on Everest, and I don't think there is much doubt they are the finest bags that can be obtained anywhere."

### INSIGHT INTO SALEWA CRAMPONS

Salewa Crampons are made from hot-rolled, chrome-molybdenum steel and heat treated in a modern, electronically controlled stove system.

*This is why there have been no reports of breakage for a long time and bending in use has been eliminated following a tightening up of control systems.*

Salewa Crampons are probably the only ones in the world individually tested to ensure correct heat treatment. They are the first crampons to be fitted with ultra-strong weldless rings.

*This is why you can rely on them.*

The points on Salewa Crampons are specially designed and positioned to give the best grip under widely varying conditions. The front points avoid unwanted leverage in mixed climbing.

*This is why you will not suffer excessive muscle strain using Salewa crampons.*

Salewa Crampons are made in a modern factory using the most advanced die stamping tools and machines.

*This is why they are moderately priced.*
