6½ × 4½ : pp. xxxiv, 286 : maps.

This is a revised edition of what has long been by far the best guide-book for anyone to carry with him on a visit to the Lakes. Some 80 pages are specially devoted to climbing, but the most technically expert and difficult rock ascents are not given. This is wise in a work meant for general use.

[**Smith, Horace.**] The Midsummer Medley. A series of comic tales . . . By the author of 'Brambletye House.'

London, Colburn, 1832

6 × 3½ : vol. i, p. 101–114 : 'A tour to the Lakes.'

This is by Horace Smith, one of the authors of 'Rejected Addresses.'

The verses on the 'Tour' open thus :—

Some of our summer Tourists seek the Alps,
Risking their own to climb the mountains' scalps,
And if they do not slip, and so
Stick midway in some icy nook

O'erhanging an abyss of snow ;
 Or that no avalanche down-slides,
 Engulphing them and all their guides,
 They write a book,
 To show the world what fools they've been
 And tell the nothings they have seen.
 Others there are who can't abide
 To glide and slide on a glacier's side,
 When a trip or a slip would send them to dip,
 With a hop and a skip,
 In a bath of snow, where you take the pleasure
 Of dying by inches and freezing at leisure.

COL DE CHALANSON (3327 m. = 10,916 ft., I. map. Cf. Ball, 'Western Alps,' pp. 261, 264).

July 10, 1921.—Lt.-Col. E. L. Strutt, with Pierre Blanc of Bonneval-sur-Arc. Party left Bonneval in perfect weather at 03.55, and by the Vallonet Glacier attained the Col du Greffier (3112 m., French map) at 07.30. Leaving again at 08.10, they followed the route of the Albaron (3662 m., French map), skirting the upper névés of the Evettes Glacier as far as the Selle d'Albaron (cf. Ball, p. 261), attained at 09.30. Thence bearing S.E., they followed the ridge, descending slightly, to the lowest depression between the Albaron and the Piccola Ciamarella (3505 m., French map). Shortly after leaving this point the party, owing to the heat and the quantity of fresh snow which had fallen two days previously, abandoned their intention of climbing the Ciamarella (3676 m., French map) and returned to the said depression or Col de Chalanson.

On the N. side of the col, an excessively steep and narrow icy curtain descends direct to the surface of the Evettes Glacier. This slope is some 750 ft. high, and is bounded to the E. by rock slabs, flush with the slope and barely emerging from the ice, while to the W. a vertical rock wall, crowned with heavy corniches, extends as far as the Selle d'Albaron.

Finding that about 1 ft. of fresh snow, still in good condition, was resting on the ice-slope, the party, at 10.10, descended backwards, kicking steps, down this slope, which must average fully 55°-60°,
